**To**
The Director (S)
Eastern Regional Office,
Ministry of Environment & Forest,
Government of India,
A-3 Chandrasekharpur,
Bhubaneswar – 751 023

**Subject** : Submission of Environmental Clearance compliances stipulated in approved EC for iron ore production of 4.00 MTPA and Iron Beneficiation Plant for 2.00 MTPA Capacity within lease area in respect of Unchabali Iron & Mn. Mines of Smt. Indrani Patnaik.

**Reference:** 1. Ministry's Clearance letter no. J-110515/214/2008-IA.II (M), dated.23.07.2009 for 4.00 MTPA Iron ore Production.
2. Ministry's Clearance letter no. J-11015/273/2009-IA.II (M) dated on 31.05.2011 for Iron ore beneficiation plant with capacity of 2.00 MTPA.

Dear Sir,

With reference to the cited subject and reference Environmental Clearance letter numbers, we are here with submitting the combined six monthly environmental clearance compliance report (both in hard and soft copies as well as by e-mail) for 4.00 MTPA Iron ore production and 2.00 MTPA Iron Ore Beneficiation plant with comprehensive data analysis reports for the period April to September 2018 in respect of Unchabali Iron & Mn. Mines of Smt. Indrani Patnaik on the subject.

Kindly acknowledge the receipt of the same.

Thanking you.

Yours faithfully,
For **Unchabali Iron & Mn. Mines of Smt. Indrani Patnaik**

BHUBANESWAR-12

# Compliance Status for stipulated as Specific conditions in approved Environmental Clearances for 4.00 MTPA iron ore production and 2.00 MTPA Iron Ore beneficiation plant established with in ML area in respect of "Unchabali Iron and Manganese Ore Mines of Smt. Indrani Patnaik" located in village(s) Unchabali & Balda, Sub-division Champua, District Keonjhar, Odisha

**REPORTING PERIOD: APRIL TO SEPTEMBER 2018**

**Combined Six Monthly Compliance Status of Environmental Clearance Conditions – "Unchabali Iron and Manganese Ore Mines & Iron ore Beneficiation Plant of M/s Indrani Patnaik" located in village(s) Unchabali & Balda, Sub-division Champua, District Keonjhar, Orissa.**

| SP. Cond. NO. | SPECIFIC CONDITION | PRESENT STATUS |
|---|---|---|
| I. **II.(B.P)** | **The project proponent shall obtain Consent to Establish and Consent to Operate from the State Pollution Control Board, Orissa and effectively implement all the conditions stipulated therein.** | As per requirement, the project has been obtained Consent to establish & Consent to Operate from SPCB, Orissa for 4.00 MTPA Iron ore production & 2.00 MTPA capacity of Iron ore beneficiation plant. The obtained Consent to Operate includes two numbers of 200 TPH mobile crusher plant, two numbers of 150 TPH mobile crusher plant, three numbers of 250 TPH mobile screen plant and one number of Iron ore beneficiation plant with capacity of 2.00 MTPA feed materials. The compliance to the conditions stipulated in the approved consent to establish & consent to operate has been implemented effectively. The latest consent to operate compliance report has been submitted to SPCB, Orissa for the year 2017-2018, and the same is enclosed as **Annexure-1.** |
| II. **I(B.P)** | **Necessary forestry clearance under the Forest (Conservation) Act, 1980 for an area of 103.432ha forestland involved in the project shall be obtained before starting mining operation in that areas. Till such time mining activities shall be restricted to an area of 67.16haof forestland for which approval under section-2 of the forest (Conservation) Act, 1980 was granted by the Ministry of Environment and Forests on 03.05.2007. Environmental Clearance is subject to grant of forestry clearance. No mining shall be undertaken in the forest area without obtaining requisite prior forestry clearance.**<br>**No activity relating to the project** | As per condition, the forest clearance has been obtained from MoEF for an area of 103.432 Ha in two phases under the Forest (Conservation) Act, 1980. First phase forest clearance was obtained on 03.05.2007 for an area of 35.275 Ha., vide MoEF letter no: 8 (21)40/2004-FCE dated 03.05.2007 and second phases forest clearance has been obtained on 31.09.2015 over an area of 68.157 Ha., vide MoEF& CC letter no F.NO.8-67/2014-FC dated on 31.09.2015**.**<br>The copy of the forest clearances obtained from MoEF& CC is attached as **Annexure -2** (First phase for 35.275 Ha) & **Annexure -3** (Second phase for 68.157 Ha). |

| | | |
|---|---|---|
| | **shall be undertaken in the forestland for which forestry clearance under the forest (conservation) Act, 1980 has not been obtained. The environmental clearance is subject to grant of forestry clearance.** | |
| III. | **The environmental clearance is subject to approval of the State Land use Department, Government of Orissa for diversion of agricultural land for Non-agricultural use.** | There is no agricultural land within in the mine lease area. Therefore, the said diversion from state land use department is not applicable. |
| IV. | **The mining operations shall be restricted to above ground water table and it should not intersect groundwater table. In case of working below the ground water table, prior approval of the Ministry of Environment & Forests and Central Ground Water Authority shall be obtained, for which a detailed hydrological study shall be carried out.** | The present mining operation is restricted to above the ground water table and there is no proposal to intersect the ground water table as per the approved Scheme of Mining.<br>The Project has carried out detailed hydrology and hydro geological study through and as per hydrology study report the ground water table exists at 478 aMSL and present mine working operation is at 530 aMSL.<br>In case of ground water table intersection in future, the project will abide the said condition and will get prior approval from MoEF& CGWA. |
| V.<br>**XIII. (B.P)** | **The project proponent shall ensure that no natural watercourse and/or water resources shall be obstructed due to any mining operations. Adequate measures shall be taken for conservation and protection of the seasonal streams, if any emanating from the mine lease area during the course of mining operation.**<br>**Appropriate mitigate measures should be taken to prevent pollution of the Baitarani river, in consultation with the State Pollution Control Board.** | No water course and / or water resources are being obstructed due to our mining operation. To ensure the same project has been under taken runoff management study and prepared site specific runoff management plan through KRG Rain Water Foundation, Chennai. Under the site specific runoff management plant, project has under taken various mitigate measure in and around the mine lease area.<br><br>**Mines runoff management during monsoon period:**<br>The mines runoff water is not allowed for direct discharge from mine lease area. |

| | | |
|---|---|---|
| | | Hence, the entire generation of mines runoff water (during monsoon period) is collected to the bottom of the pit, checks dams and check weirs and after treatment through silt cum Sedimentation by giving adequate retention period, the final water is allowed to discharge. However, the entire mine area and check dams/check weirs connectivity is properly made by proper drainage pattern.<br><br>All the implementations have been carried out with consideration of maximum rain fall and technical design followed as per KRG rain water harvesting recommendation. The detailed implementation of check dams and check weirs is given in **table -1**.<br><br>**Nallah Protections measures:**<br><br>In addition to the site specific mitigation measures, the project has been carried out various Nallah protection measures around the mines premises. The implementations are follows.<br><br>✓ Nallah banks are protected by Guard wall with proper filtration arrangements to avoid entry of the any silt carry over to the water bodies during rainy season from other sources.<br><br>✓ Check weirs/check dams are conferred along the Nallah passing area to persuade silt sedimentations.<br><br>✓ Nallah de-siltation is under taken during pre-monsoon period to maintain its bio cycle.<br><br>✓ Nallah both side slopes are pitched with loose boulders to avoid the barrier erosion during monsoon |

| | | |
|---|---|---|
| | | period.<br><br>Plantation and Vettiver plantation was carried out all along the Nallah boundaries and few areas is converted as green barriers. The detailed implementation is given in **table -2** and photo evidence for the same is given below.<br><br>**Water Harvesting:**<br><br>The project has constructed/ developed four numbers of water harvesting ponds in surrounding villages to encourage the water table. The ponds are regularly de-silted and well maintained on regular basis. The detailed implementation is given in **table -3.**<br><br>**<u>Dump Management:</u>**<br><br>**Dump Preparation:** Proper terracing, slope level and sub benches are maintained in all mines waste / sub grade dump.<br>**Retention wall:** Bottom of the OB dump and sub grade dump provided / constructed with adequate size of retention wall to avoid the dump failure during monsoon period.<br>**Drainage Pattern:** Proper drainage pattern is provided at bottom of the waste / sub grade dumps and other required area to collect & treat the mines runoff water.<br>**Coir-mat and plantation:** Surface area of the waste /sub grade dump is covered with plantation / coir geo textile application along with local grass seeds to avoid the dump erosion during monsoon period. The detailed implementation is given in **Table – 4.**<br><br>**Photo evidence is given below as PHOTOS-1.** |

| | | |
|---|---|---|
| VI. | **The top soil, if shall temporarily be stored at earmarked site(s) only and should not be kept unutilized for long, the topsoil should be used for land reclamation and plantation.** | No top soil was generated during this reporting period, because the current mining operation is restricted within the already diverted forest area and there is no new development in the reporting period. In case of top soil generation taken place in the future, it will be stored inane earmarked area and necessary safeguard measures will be under taken to preserve its nutrients values, so that it will be used for future land reclamation and raising of plantations. |
| VII. | **The project proponent shall not undertake beneficiating of the mineral as part of this project. For understanding beneficiation, necessary prior approval under the provisions of EIA Notification, 2006 shall be obtained.** | In this regard project has been obtained Environment clearance from Ministry of Environment & Forest, Government of India vide letter no. J-11015/273/2009-IA.II (M) dated 31.05.2011 for setting up iron ore beneficiation plant for capacity of 2.0 MTPA (2 x 185 TPH). A copy of the Environmental Clearance obtained from MoEF for undertaking beneficiation within lease area is enclosed as **Annexure – 4.** |
| VIII. | **The over burden (OB) generated during the mining operation shall be temporarily stacked at earmarked dump site(s) only for back filling. Back filling shall commence from the year 2011-2012 onwards. The accumulated waste shall be liquidated by the year 2016 and there shall be no external dump thereafter. The back filled area shall be reclaimed by plantation. Monitoring and management of rehabilitated areas shall continue until vegetation becomes self-sustaining. Compliance status should be submitted to the Ministry of Environment & Forests and its Regional office, Bhubaneswar on six monthly basis.** | The generated over burden and / waste is stacked at earmarked dump site as per approved mining plan and no back filling and reclamation is being under taken till date. As per approved Scheme of Mining, the backfilling will commence from 2019-2020 onwards. So, reclamation will be carried out after 2019-2020 as per the approved Scheme of Mining approved by Indian Bureau of Mines, Govt. of India.<br>However, the existing O.B dump is preserved with proper manner to the future reclamation. Such as like proper dozing, terracing, adequate slope, ditching and Plantation. |

| | | |
|---|---|---|
| IX. | **Catch drains and siltation ponds of appropriate size should be constructed around the mine working soil, mineral and temporary OB dumps to prevent runoff water and flow of sediments directly into the Baitarani river, the Jalpanadi, the Kasinallah, the Dolkonallah, Dalkinallah, the Ghaghara nallah, the Jagdharanadi, the Gahirjalanallah, the Mithida spring and other water bodies. The water so collected should be utilized for watering the mine area, roads, green belt development etc. The drains shall be regularly de – silted particularly after monsoon and maintained properly. Garland drains, settling tanks and check dams of appropriate size, gradient and length shall be constructed both around the mine pit and the temporary OB dumps to prevent runoff water and flow of sediments directly into the Baitarani river, the Jalpanadi, the Kasinallah, the Dolkonallah, Dalkinallah, the Ghagaranallah, the Jagdharanadi, the Gahirjalanallah, the Mithida spring and other water bodies and dump capacity should be designed keeping 50% safety margin over and above peak sudden rainfall (based on 50 years data) and maximum discharge in the area adjoining the mine site. Dump capacity should also provide adequate retention period to allow proper settling of silt material. Sedimentation pits should be constructed at the corners of the** | The project has under taken varies Mitigative measures on the above. The detailed implementation is follows.<br><br>**<u>Dump Management:</u>**<br><br>**Dump Preparation:** Proper terracing, slope level and sub benches are maintained in all mines waste / sub grade dump.<br>**Retention wall:** Bottom of the OB dump and sub grade dump provided / constructed with adequate size of retention wall to avoid the dump failure during monsoon period.<br>**Drainage Pattern:** Proper drainage pattern is provided at bottom of the waste / sub grade dumps and other required area to collect & treat the mines runoff water.<br>**Coir-mat and plantation:** Surface area of the waste /sub grade dump is covered with plantation / coir geo textile application along with local grass seeds to avoid the dump erosion during monsoon period.<br><br>**<u>Mines runoff management during monsoon period:</u>**<br><br>The mines runoff water is not allowed to direct discharge from mine lease area. Hence, the entire generation mines runoff water (during monsoon period) is collected to the bottom of the mines pit, checks dams and check weirs and after treatment (Silt Sedimentation by giving adequate retention period) process the final water is allowed to discharge. However, the entire mine area and check dams/check weirs connectivity is properly made by preplanned drainage pattern.<br>All the implementations have been carried out with consideration of maximum rain fall and technical design is followed as per KRG rain water harvesting recommendation. |

| | | |
|---|---|---|
| | **garland drains and de - silted at regular intervals.** | **Nallah Protections measures:**<br><br>In addition to the site specific mitigation measures, the project has been carried out various Nallah protection measures around the mines premises. The implementations are follows.<br><br>✓ Nallah banks are protected by Guard wall with proper filtration arrangements to avoid entry of the any silt carry over to the water bodies during rainy season from other sources.<br><br>✓ Check weirs/check dams are conferred along the Nallah passing area to persuade silt sedimentations.<br><br>✓ Nallah de-siltation is under taken during pre-monsoon period to maintain its bio cycle.<br><br>✓ Nallah both side slopes are pitched with loose boulders to avoid the barrier erosion during monsoon period.<br><br>✓ Plantation and Vettiver plantation was carried out all along the Nallah boundaries and few areas is converted as green barriers.<br><br>**Water Harvesting:**<br><br>The project have been constructed/ developed four numbers of water harvesting ponds in surrounding villages to encourage the water table. The ponds are regularly de-silted and well maintained on regular. |

| | | |
|---|---|---|
| X. | **Dimension of the retaining wall at the toe of the temporary over burden dumps and OB benches within the mine to check run-off and siltation should be based on the rain fall data.** | Based on rain fall data, the retaining wall for the length of 210 RM x 2 Mtr (H) x 1.5 Mtr (W) has been constructed at varies location like bottom of the OB dump, sub grade dump & other required area to check the runoff.<br>PHOTOS ARE ATTACHED BELOW AS **PHOTO-2** |
| XI.<br>**VII (B.P)** | **Plantation shall be raised in an area of 98.8627ha including a 7.5 m green belt in the safety zone around the mining lease, back filled and reclaimed area, mine benches, along the roads etc. by planting the native species in consultation with the local DFO / Agriculture Department. The density of the trees should be around 2500 plants per hectare.**<br>**A green belt of adequate width shall be developed all around the plant by planting the native species in consultation with the local DFO/Agriculture department within first five years.** | As per condition, the plantation will be raised for an area of 98.8627 Ha after completion of the mines life / end of the mine operation in mine lease, back filled area and reclaimed area, mine benches, along the roads etc. However, during running mine operation project has carried Plantation at various location like safety zone, waste dump, mines plant area, mines haul road, village roads, villages schools and railway sidings in consultation with the local DFO.<br>Till reporting period a total number of 89053 numbers of saplings has been planted and the survival rate is 69 %, on an average of 61446 species survived up to this reporting period. A comprised year wise plantation details are enclosed as **TABLE.-5A** and type of plants planted in the year was given in the **TABLE- 5B**. Photo evidence for the plantation inside and out lease area is given below.<br>PHOTOS ARE GIVEN BELOW AS **PHOTOS-3** |
| XII.<br>**IV, VI & VII (B.P)** | **Effective safe guard measures such as regular water sprinkling should be carried out in critical areas prone to air pollution and having high levels of SPM and RSPM such as haul road, loading and unloading point and transfer points. It shall be ensured that the Ambient Air Quality parameters conform to the norms prescribed by the Central Pollution Control** | The project has implemented different type of dust suppression system to arrest the air pollution from the source level in and around the mines premises.<br>The detailed implementations are follows.<br>✓ Fixed type water sprinklers are implemented in mines permanent haul roads and dispatch roads.<br>✓ Mines benches, temporary haul roads and other processing areas dust |

| | | |
|---|---|---|
| | **Board in this regard.**<br><br>**The Project Proponent shall carry out conditioning of the ore with water to mitigate fugitive dust emission.**<br><br>**Necessary safeguard measures shall be taken for effective control of particulate levels (PM10) in the area. The safeguard measures shall be implemented within first three months and their effectiveness shown with supporting data of actual air quality monitoring.** | generation is suppressed by use of mobile water tankers. In this regard project has engaged two no. of 25 KL mobile water tanker, which is inbuilt with high pressure hydraulic sprinkling system.<br><br>✓ Five numbers of 8 KL capacity mobile water tankers is being used for dust suppression in the Public roads, railway sidings approaching roads & railway yards.<br><br>✓ Portable type trolley mounted sprinkler has been placed in loading & unloading points to avoid the dust generations.<br><br>Haulage roads are being maintained with grader and water sprinkling to avoid any sort of ruts and potholes. Detailed implementation is given in **table – 6**.<br><br>**DUST SUPPRESSION IN CRUSHER & SCREEN PLANT:**<br>Effective dry fog system is implemented in all the crusher and screen plants. Beneficiation plant, the entire process is in wet condition except hopper area and the hopper is provided with dry fog to avoid the dust generation. To avoid the flow of air born dust from convey belt movement the conveyor belts of crusher and screen Plants are covered with hoods.<br><br>**MONITORING**<br>The monitoring of AAQ is being done in the core as well as buffer zone of the ML area, there are 2 no. of monitoring station in core zone i.e. Mines Office and Eastern Site of ML Area and there are 5 no. of monitoring stations in the buffer zone such as Unchabali Village, Balda |

| | | |
|---|---|---|
| | | Village, Nayagarh Village, Pid-Pukhari village and Jalahari village. Monitoring of AAQ is carried out every month except monsoon season. The monitoring report for the period April to September 2018 reveals that the parameter like PM10, PM2.5, SO2 and NOx are well within the norms as per NAAQs notifications made by the CPCB. A comprised AAQ monitoring reports for the reporting period is enclosed as **TABLE.-7.**<br>PHOTOS ARE GIVEN BELOW AS **PHOTOS-4** |
| XIII. | **Regular monitoring of the flow rate of the springs and perennial nallah shall be carried out and records maintained.** | Regular monitoring of flow rate of different water bodies is being carried out seasonally by covering the Nallah/rivers i.e. Baitarani River, Unchabali Nallah, Kashi Nallah, Jalpa Nallah, Gahirajala Nallah, Dolko Nallah &Dalki Nallah. Latest flow rate monitoring reports are enclosed as **TABLE-8.** |
| XIV. | **SPECIFIC CONDITION – 14 (4.00 MTPA)**<br>**Regular monitoring of water quality upstream and downstream of the Kasinallah, the Dolkonallah, the Dalkinallah, the Ghagranallah, the Gahirajalanallah and the Mithida spring shall be carried out and record of monitored data should be maintained and submitted to Ministry of Environment and Forest, its Regional Office, Bhubaneswar, the Central Ground Water Authority, the Regional Director, the Central Ground Water Board, the State Pollution Control Board and Central Pollution Control Board.** | Monitoring of water quality of Baitarini River, Unchabali Nallah, Kasi Nallah, Jalpa Nallah, Gahirjala Nallah, Mithida Spring and Dalco Nallah is being carried out seasonally. The monitoring data covers a total of 41 parameters and results are very well within the norms. The data is being maintained and submitted to authorities regularly. Latest surface water quality report analysed during last monsoon is enclosed as **TABLE.-9.** |
| XV.<br>**IX (B.P)** | **The project authority should implement suitable conservation measures to augment ground resources in the area in consultation with the Regional** | In this regard project has been engaged KRG RAIN WATER FOUNDATION, CHENNAI in consultation with Regional Director, CGWB and Bhubaneswar for technical guidelines and implemented various conservation |

| | | |
|---|---|---|
| | **Director, Central Ground Water Board.** | measures to augment the ground water resources for in and around the mine lease area. The detail for the same is as follows;<br>**ROOFTOP RAINWATER HARVESTING:**<br>Rooftop rain water harvesting system has been implemented at mines employee camp and Unchabali dispensary towards water augment. The technical design and other parameters are followed as recommended by KRG rain water harvesting with consultation of regional director, CGWB, Bhubaneswar. From this establishment 4200 CUM/ANNUAL water is recharged to the ground.<br>The project has developed/ constructed four numbers of water harvesting ponds to in mines surrounding villages to encourage water augment. The ponds are regularly de-silted and well maintained. Total harvesting pond water holding capacity is 1.5 Lakh CUM/ANNUM. The details are given in **TABLE.-3.**<br><br>**SETTLING CUM PERCOLATION POND & CHECK DAMS:**<br>Based on hydrology study the project has implemented five number of the check dams where soil is having high percolation rate and one number of percolation pond is provided at the south side ML area by considering the water flow. The same details are given in **TABLE.NO.-1.**<br>**The photo evidences are attached as PHOTOS-5** |
| XVI.<br>**X**<br>**(B.P)** | **Regular monitoring of ground water level and quality should be carried out in around the mine lease by establishing a network existing wells and installing new piezometers during the mining operation. The periodic monitoring [(at least four times in** | - **GROUND WATER QUALITY:**<br><br>Ground water quality is being monitored regularly by seasonally at 10 locations including core and buffer zone. The monitoring locations are namely 1) Inside Mining lease area, 2) Unchabali village, 3) Kalimatti village, 4) Balda Village, 5) Malda |

| | | |
|---|---|---|
| | **a year Pre –monsoon (April-May), Monsoon (August), Post monsoon (November) and Winter (January); once in each season)] shall be carried out in consultation with the state Ground Water Board/Central Ground Water Authority and the data thus collected may be sent regularly to Ministry of Environment and Forests and its Regional Office, Bhubaneswar, Central Ground Water Authority and Regional Director, Central Ground Water Board. If at any stage, it is observed that the ground water table is getting depleted due to the mining activity; necessary corrective measures shall be carried out.** | Village, 6) Siljora Village, 7) Nayagarh Village, 8) Basanthapur Village, 9) Employee's camp & 10) Jaganathpur. The latest ground water quality report is enclosed as **Table-10.**<br>- **GROUND WATER LEVEL:**<br>The ground water level is being monitored by seasonally i.e. pre-monsoon, monsoon, post monsoon and winter. The latest ground water level report is given in **table-11.**<br>- **INSTALLING NEW PIEZOMETER:**<br>The project has installed Piezometers at mines observation bore wells. The ground water fluctuations are being observed in the bore well & results are recorded by regular intervals. The latest month piezometer observation data is given **as annexure -5.** |
| XVII. | **Appropriate mitigate measures should be taken to prevent pollution of the Baitrani river, the Jalpanadi and Jagdharanadi in consultation with the State Pollution Control Board.** | Site specific mitigation measures to prevent silt carried into nearby natural water bodies got implemented like; surface run off management structures, retaining wall followed garland drains, check dam, settling cum percolation ponds etc. Apart from that, guard wall have been constructed across the bank of the natural water bodies. The above structures got developed in consultation with SPCB, Orissa. The detailed Site implementation details are given in **TABLE.NO.-1, 2, 3 & 4**. |
| XVIII. **XI (B.P)** | **The project proponent shall obtain prior permission of the competent Authorities for drawl of requisite quantity of water (surface water and ground water) required for the project.** | The project has obtained the ground water NOC from Central Ground Water Authority vide letter No.21-4(88YSER/GGWA/2008-1903 for withdrawal quantity of 1175 CUM/D of ground water. The obtained NOC from CGWA is enclosed as **ANNEXURE – 6.** |
| XIX. **XII (B.P)** | **Suitable rainwater harvesting measures on long term basis shall be planned and implemented in consultation with Regional** | - **ROOFTOP RAINWATER HARVESTING:**<br>The project has been implemented rooftop rain water harvesting system at project |

| | | |
|---|---|---|
| | **Director, Central Ground Water Board.** | employee's camp and Unchabali dispensary towards ground water re-charge. The technical design and other parameters are followed as recommended by KRG rain water harvesting with consultation of regional director, CGWB, Bhubaneswar. From this establishment 4200 CUM quantity of ground water is recharged to the ground water table every year.<br>- **WATER HARVESTING PONDS AT VILLAGES:**<br><br>The project has developed four numbers of water harvesting ponds to encourage the water percolation and water harvesting in surrounding villages. The ponds are regularly de-silted and well maintained. Total harvesting pond water holding capacity is 1.5 lakh CUM/ANNUM. Details of harvesting ponds developed in surrounding villages are given in **TABLE NO.-3.**<br>- **PERCOLATION POND & CHECK DAMS:**<br><br>Based on hydrology study the project has implemented five number of the check dams, settling cum percolation pits where soil is having highly percolating rate and one number of percolation pond is provided at the south side of the broken up area. Details of check dams and check weirs are follows as **TABLE NO.-1**. |
| XX. | **Vehicular emissions shall be kept under control and regularly monitored. Measures shall be taken for maintenance of vehicles used in mining operations and in transportation of mineral. The mineral transportation shall be carried out through the covered trucks only and vehicles carrying the mineral shall not be overloaded. No transportation of ore outside the mine lease area** | The project is ensuring vehicle emission monitoring for all mining and other supporting vehicles / equipment. The monitoring of vehicle emission is carried out through Diesel Smoke Meter by engage of THRIVENI Pollution Testing Centre, Unchabali Village, Keonjhar, Pin-758034.A sample HEMM emission test result is attached as **Annexure-7.**<br>Apart from testing of transporting vehicles emission on random basis, the project has been introduced a software technology RF ID |

| | | |
|---|---|---|
| | **shall be carried out after the sunset.** | system in entry gate of the mines, this system is having automatic functions to read the status of the vehicle pollution certificate validity and other relevant parameters.<br>Basically, the baseline data of the vehicle is being loaded in the initial entry of the vehicle to the mines and it is regularly monitored in every trip of entry in gate, if any vehicles are not having valid pollution certificate or any other parameters then automatically entry of the vehicle will be not allowed by system. |
| XXI. | **No blasting shall be carried out after the sunset. Blasting operation shall be carried out only during daytime. Controlled blasting shall be practiced. The mitigate measures for control of ground vibrations and to arrest fly rocks and boulders should be implemented.** | No blasting is carried out after the sunset and blasting is carried out only at day time. The control blasting is practiced using lager top stemming column, the Nonel technology and proper blast design& firing pattern with effective supervision of total blasting operations as per the recommendation of the CIMFR, DHANDBAD.<br>As on date no records reveals beyond the permissible limit during the reporting period. A summarized report for the reporting period is enclosed as **TABLE NO.-12** and a sample report is enclosed as **ANNEXURE -8.** |
| XXII. | **Drills shall either be operated with dust extractors or equipped with water injection system.** | The drilling operation is being carried out with both dust extractor and water injection system. Presently the project is using DP 1100 drilling machine for drilling operation. The said drilling machine is inbuilt with both water injection system and dust extraction systems. The photo evidence for the same is given below.<br>PHOTO evidences given below as **PHOTOS-6** |
| XXIII. | **Mineral handling plant should be provided with adequate number of high efficiency dust extraction system. Loading and unloading areas including all the transfer points should also have efficient dust control arrangements. These should be properly maintained and operated.** | 1) Effective dry fog system is implemented in all the crusher and screen plants.<br>2) In Beneficiation plant, the entire process is in wet condition except hopper area and the hopper is provided with dry fog to avoid the dust generation.<br>3) The conveyor belts of crusher and screen Plants are covered with hoods.<br>4) Regular water sprinkling is carried out in |

| | | |
|---|---|---|
| | | the loading and unloading area. |
| XXIV. | **Sewage treatment plant should be installed for the colony. ETP should also be provided for workshop and waste water generated during mining operation.** | STP is provided / implemented along with the skimmer mechanism at mines employee's camp for treatment and reuse of the waste domestic water from Kitchen, toilet and etc. The treated water is used for plantation and dust suppression activities. ETP is provided at mines work shop for the treatment of waste water from water service of equipment. The existing ETP is having physical separation of oil and grease by oil trapping system and silt sedimentation pit.<br>The both STP and ETP final discharge water is being monitored on fortnightly once to ensure the final discharge water in line to approved CTO and record maintained for the same. The latest monitoring report is enclosed here as **table. No – 13 and table. No 14.**<br>Photo evidences given below as **PHOTOS-7** |
| XXV. **XIV (B.P)** | **Pre-placement medical examination and periodical medical examination of the workers engaged in the project shall be carried out and records maintained. For the purpose, schedule of health examination of the workers should be drawn and followed accordingly.** | Initial Medical Examination & Periodical Medical Examination is being carried out to all company & contractors employees on regular basis. The IME & MPE is being carried as per in compliance to Mines Act 1952 & rules 1956 and amendments there to.<br>During the reporting period (April to September 2018) project has carried out IME & PME for 27 employees. The IME & PME tests include PFT, X-Ray, and lung spirometer etc. A comprised summery report for IME & MPE during report period is enclosed as **Annexure – 09.** |
| XXVI. **XVII (B.P)** | **The project proponent shall take all precautionary measures during mining operation for conservation and protection of endangered fauna namely elephant, sloth bear, etc. spotted in the study area. Action plan for conservation of** | The Site Specific Wildlife Conservation Plan got prepared by Sri. S. K. Pattnaik, Retd. IFS & Shri S.K.Mohanty, Retd. OFS with an estimated cost of Rs. 104 lakh and approved by PCCF-Wild Life and Chief Wild Life Warden. In which Rs. 34 lakh has been earmarked for implementation of Site |

| | | |
|---|---|---|
| | **flora and fauna shall be prepared and implemented in consultation with the State Forest and Wildlife Department. All the safeguard measures brought out in the wild life conservation plan prepared specific to this project site shall be effectively implemented. Necessary allocation of the funds for implementation of the conservation plan shall be made and funds so allocated shall be included in the project cost. A copy of action plan may be submitted to the Regional Office of the Ministry of Environment and Forests, Bhubaneswar.** | Specific Wild Life Conservation Plan within the Mining Lease area and Rs. 70 Lakh has been earmarked for implementation for the purpose in the buffer zone i.e. within the zone of influence. An amount of Rs. 15, 91, 691/- rupees has been made towards Regional Wild Life Management Plan and Rs. 21, 75, 000/- rupees towards site specific Wild Life Management Plan.<br>Various activities has been under taken towards protection of wild animals by implementation of solar electric fencing in mines operation boundary area to avoid the fall down of any wild animals to mines operation, awareness program among local and staffs members etc. The approved budgetary forecast for the site specific wildlife conservation plan is enclosed as **Annexure – 10**. |
| XXVII. **XVI (B.P)** | **Provision shall be made for the housing of the construction labour within the site with all necessary infrastructure and facilities such as fuel for cooking, mobile toilets, mobile STP, safe drinking water, medical health care, crèche etc. The housing may be in the form of temporary structures to be removed after the completion of the project.** | Not Applicable. As there is no such construction activity |
| XXVIII. | **The critical parameters such as SPM, RSPM, NOx in the ambient air within the impact zone, peak particle velocity at 300m distance or within the nearest habitation, whichever is closer shall be monitored periodically. Further, quality of discharge water shall also be monitored [TDS, DO, pH and total suspended solids (TSS)]. The monitored data shall be** | All these critical parameters are being monitored periodically & uploaded on the company website i.e. www.uimm-ip.com. The said monitored parameters i.e. for AAQ; PM10, PM2.5, SO2, NOx, STP, ETP discharge, for surface run off discharge from the mine (treated) etc. is being displayed through an Electronic display board installed at the main gate of the project site of the company for public domain. Environmental parameters uploaded in the |

| | | |
|---|---|---|
| | **uploaded on the website of the company as well as displayed on a display board at the project site at a suitable location near the main gate of the company in public domain. The circular no. J-20012/1/2006-IA.II (M) dated 27.05.2009 issued by Ministry of Environment and Forests, which is available on the website of the Ministry www.envfor.nic.in shall also be referred in this regard for its compliance.** | company website are enclosed as **Annexure – 11** and photo of the display board is given below AS **PHOTO-8.** |
| XXIX. | **A Final Mine Closure Plan along with details of Corpus Fund should be submitted to the Ministry of Environment & Forests 5 years in advance of final mine closure for approval.** | The Project has submitted a Bank guarantee of Rs. 17,43,693/-for reclamation and rehabilitation of 69.7477 Ha mined out and other allied activities area @ 25, 000/- Ha as a part of the management of the mines closure of the Project. |
| **III.(B. P)** | **The water recovery and spill way system shall be so designed that the natural water resources are not affected and that no spill water goes into the nearby rivers.** | The existing beneficiation plant is well designed with principle of the maximum water recovery and zero spills called zero discharge based Beneficiation plant. In consequence of that, the plant entire water circuit is developed by closed manner, and process water from all the consuming point is being collected to thickener by proper pipe line arrangement. However, with use of thickener process and filter press mechanism about 97% of the water is being recovered and reused for the plant operation. |
| **V (B.P)** | **The cake generated from the filter press shall be dumped initially for two years along with the overburden as inter mixed layers and thereafter shall be filled back into the mined out area. Compliance status shall be submitted to the ministry of** | The generation of filter press waste i.e. filter cake is being dumped along with overburden dump as inter mixed layers. As per latest approved mining scheme the period of reclamation is occurring on the year of 2019-2020, the backfilling of filter press waste along with overburden will be carried out during above said period. Regarding |

| | | |
|---|---|---|
| | **environment & forest and its regional office located at Bhubaneswar on six monthly bases.** | compliance status, we will follow the said condition for submission of compliance report to MoEF& Regional office located at Bhubaneswar. |
| **XV (B.P)** | **Occupational health surveillance program of the workers shall be undertaken periodically to observe any contractions due to exposure to the dust and take corrective measures, if needed; health records of the workers shall be maintained.** | Workers engaged in Operations are provided with earplugs / muffs, besides this acoustic enclosure for all machine operating cabins are provided. It is being monitored by Noise Level Meter; the results reveals very well within norms.<br>Initial Medical Examination & Periodical Medical Examination is being carried out to all company & contractors employees on regular basis. The IME & MPE is being carried as per in compliance to Mines Act 1952 &rules 1956 and amendments there to. During the reporting period (April 2018 to September 2018) project has carried out IME &PME for 27 employees. The IME & PME tests include PFT, X-Ray, and lung spirometer etc. A comprised summery report for IME & MPE during report period is enclosed as **Annexure – 09.** |

**Combined Six Monthly Compliance Status of Environmental Clearance Conditions – "Unchabali Iron and Manganese Ore Mines & Iron ore Beneficiation Plant of M/s Indrani Patnaik" located in village(s) Unchabali & Balda, Sub-division Champua, District Keonjhar, Orissa.**
